

Direct Control SWATBox RPK-40

The Direct Control SWATBox RPK-40 provides a secure, monitored asset position located in a locking drawer that can be mounted in a wall or other suitable, protected partition. Controlled and monitored by existing access control systems, the stock interface features a proximity card reader with keypad that allows entry of the access number. The locking drawer securely stores single asset and includes sensors that provides indication of drawer state and asset presence. The drawer can be unlocked remotely through the access control system.

Theory of Operation:

This solution is to allow the ability to monitor and manage an override key for a customer cage. This solution will place an emergency keybox enclosure with keypad style card reader at the customer cage to allow the ability to access the key utilizing their credentials.

KEY PRODUCT FEATURES

- Mechanical release after unlocking ensures drawer remains closed until recipient is ready to access interior
- Drawer locks after time out to preserve security
- Drawer state sensor allows remote indication of drawer being open/closed
- Asset presence sensor allows remote indication of asset in/out
- Includes illuminating authorization success/fail indicator
