

# SECURITY ASSET MANAGEMENT

# CORRECTIONS

Key Systems, Inc. (KSI) is an industry leader in key and asset security management. For over 36 years our team has developed custom engineering solutions to enhance prison security safety. Our products play a vital role in safeguarding the well-being of corrections personnel.

Our engineering department is continually adding new and exciting products to our existing lineup of network-ready, web-enabled asset control and monitoring devices. Our team works diligently to stay ahead of industry trends and remain competitive in a rapidly evolving technological landscape. KSI is committed to designing and manufacturing products that prioritize safety; ultimately creating a more secure environment for those who work within corrections' facilities.

KSI's Security Asset Managers, Handcuff Security Asset Managers, OC Spray Station and Lockers, are designed to harness the power of integration into your current monitoring systems. Our products utilize Global Facilities Management System™ (GFMS™) software to ensure concise monitoring and reporting capabilities. We adapt our products to increase safety to employees by offering features that allow the assignment of different levels of user access and reduce employee risk of lost, misplaced, or stolen assets.

As a leader in the industry, we are passionate about providing your most important assets with the highest level of safety and security. KSI is headquartered in upstate New York and all our products are manufactured and serviced in the USA. We are dedicated to domestic manufacturing to support our local economy and sustainability.

## SECURITY ASSET MANAGERS™

Key Systems, Inc. offers a range of innovative, electronically controlled cabinets designed to securely store, audit, and manage valuable assets including keys, handcuffs, tools, lockers, weapons, and drugs. User Identification options include PIN, Card Swipe, Proximity, and Biometrics. Our Security Asset Managers™ (SAM) offer solutions that provide advanced security and control for your keys and other important assets. KSI can personalize these devices to secure a wide variety of sensitive items. Access is assigned to one or more users based on configuration through GFMS Software. Our Software combines sophisticated and adaptable, PC-based software with no client installs.

Our engineers offer a host of customization options to ensure the protection and management of your most important assets with a Security Asset Manager™ that best fits your individual needs. We understand you may desire a customized key box to function in exactly the way you want

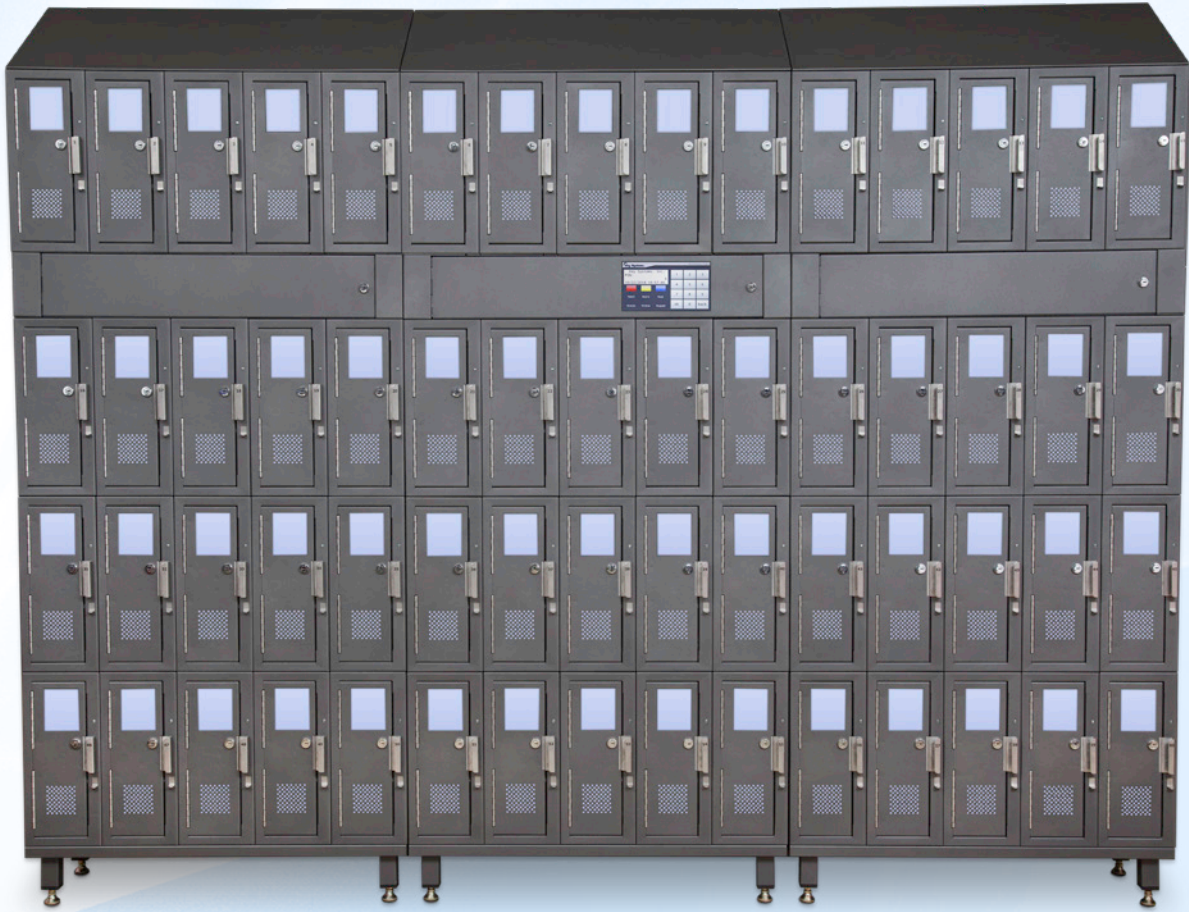

for maximum security and peace of mind. From custom doors, panels, and key box dimensions to user access options, extra storage space and custom colors, your perfect solution is just waiting to be built.

### TAMPER-PROOF KEY RINGS

High-security stainless steel rings designed to protect valuable assets by preventing unauthorized access or tampering. The patented technology ensures the rings cannot be opened without detection, adding an extra layer of security. Our key rings can be used independently as a robust key ring or alongside the company's Security Asset Manager™ (SAM™) electronic cabinets.

## LOCKERS

KSI provides electronically controlled lockers which may be modified in a wide variety of ways to accommodate the needs of your facility. Our intelligent locker solutions are in place around the world controlling local and distributed access to a range of high-value assets. KSI's locker solutions can secure firearms, radios, medical equipment, shops tools, expensive electronics, and a host of other assets in an array of shapes and sizes.

Lockers are available with AC charging of stored assets, LED lighting and solid or clear Lexan® doors. Locker arrangements can be designed as standalone units or can be setup to work in

conjunction with a Security Asset Manager™. Select from our popular cabinet configurations or let us design custom lockers to securely manage and charge your electronic devices.

KSI's Smart ID's offer an added layer of security for your assets. By adding unique electronic ID capabilities to your assets, we can monitor, secure, and inventory your products with our Security Asset Manager™ cabinets and Global Facilities Management System™ (GFMS) software.

## OC SPRAY STATION™

Correctional facilities implement security protocols, such as controlled access points, surveillance systems, and secure confinement areas. Officers utilize all protocols and appropriate safety systems to effectively manage the inmate population. These measures are designed to prevent unauthorized access, reduce the risk of escape, and enhance overall safety for staff and inmates.

The integration of the OC Spray Station offers an essential layer of protection. Our innovative product design was developed specifically for the safety of officers and security personnel. KSI developed a sophisticated internal scale, that checks the weight of the canisters upon removal and return to the main unit. This process ensures that the canister contains a safe and effective amount of OC spray for future use. If a canister fails to meet the weight requirements either upon removal or return, the system will prompt the user to dispose of the canister in the attached disposal bin. The OC Spray Station is integrated with our GMFS software, which provides

detailed reporting of all transactions at the cabinet, to allow for easy tracking of the canisters.

### MULTIPLE SIZES

The MK4 and MK3 units come in three different cabinet sizes, which can hold 24, 48, or 80 canisters. The MK9 cabinet holds 16 canisters.

# Security Asset Manager™ Specifications

# Global Facilities Management Software™

GFMS™ combines sophisticated and adaptable, web-enabled, PC-based software with no client installs. Key Systems, Inc. will help you formulate an asset management strategy specific to your facility's requirements, regardless of size, scope, and pre-existing technology. Low maintenance applications emphasizing systems integration and simple design for security are the cornerstones of our philosophy toward system management.

# Accessories™

## Tamper-Proof Key Rings

Available in both solid and flexible braided stainless steel. Each ring has its own unique serial number.

## Keypad Shield

Positioned over top of the keypad or display screen to guard your PIN entry from others who may be able to view it.

## Chain Tray

The tray may be installed at the bottom of the SAM panel as a means of catching the low-hanging chains from handcuffs and preventing them from hanging out in the open.

## User Identification

All of KSI's Cabinets can be customized for an endless number of security solutions.
