

IT Cloud Services

Key Systems Cloud Hosting Services offer customers a Virtual IT department, helping to educate decision-makers and facilitate a move to the cloud. Using Key Systems resources, we provide educational lessons about the cloud and benefits of transitioning to a cloud-based model within your company. We also provide the services and expertise to help you achieve your goals in the cloud environment. Whether you're interested in transitioning certain services to the cloud or transforming your entire IT department, we are here to help.

Reduced IT Costs

The total cost of ownership is significantly reduced when employing cloud solutions vs traditional IT infrastructures. Businesses no longer need to invest heavily or to recruit technical staff simply to operate enterprise-level services for their employees and customers. The cloud takes the complexity and high initial investment out of many mission-critical services needed in today's technology-driven workplaces.

Working Remotely and Collaboration

Businesses are now accustomed to the new reality of employees working remotely, and this new level of separation will be maintained for the foreseeable future. Cloud services are designed to be accessible from almost anywhere and be secure. This allows businesses to set up cloud services and allows employees access wherever they may be. Increased collaboration is greatly enhanced as all team members can access the same tools at the same time.

Business Continuity and Disaster Recovery

Cloud-based services allow you to leverage a vast network of large providers. All major cloud service providers have numerous regional locations and employ methods to securely copy your data among multiple regions. You can have confidence that your services and data are always safe and operational. The costs scale with your use versus having to make a large investment up front to gain the same level of redundancy.

Automatic Updates for Compatibility and Security

Many enterprise-level services in the cloud gain the benefits of continual updates. These updates not only ensure your services are running optimally, but also securely. Contemporary security threats are pervasive and require vigilant defenses. When system breaches and vulnerabilities are detected, the response time is usually measured in hours -- a delay your business cannot afford to endure.

Ease of Scalability

If your infrastructure is being handled by a cloud provider, your business is given the flexibility and ease to grow whenever the time is right. Need to create a new web server to handle increased user load? Need increased capacity for a temporary sale or promotion? The cloud enables you to scale up and down as your business requires. You can quickly increase capacity without substantial investment, and you can return to normal operating size during off-peak times to maintain savings.

Key Systems Trusted Advisor

In addition to the exceptional benefits listed above, you have assurance that Key Systems will guide you through whatever cloud journey you wish to take. Gain the technological expertise we have to offer and make the switch to the cloud.
