

## Control & Monitor

The KSI Satellite is a multi-function access point to your network of GFMS Software and Security Asset Managers. Enrollment, authorization, information and much more are no longer limited to the locations where assets are stored. This compact device expands your access to the GFMS network with additional functionality and additional points of interaction.

## KSI Satellite Features

- Supports all KSI authentication methods including keypad, fingerprint and badge readers.
- Entry/Exit Controls: Control external doors or interior rooms based on asset status within the GFMS network.
- Provides remote log in, including dual/triple PIN authorization to any other GFMS enabled KSI product on your network.
- KSI Satellite may be easily mounted below or to the side of an existing SAM to improve physical accessibility and achieve ADA / OSHA compliance.
- May serve as a biometric or badge.
- Serves as time clock with available integration with payroll and attendance systems.
- Display messages to employees and visitors upon entry to facility.

***This is just a sample of the many capabilities of the KSI Satellite. Call Key Systems, Inc. for a detailed list of what it can do for you.***
