

CITY & MUNICIPALITY

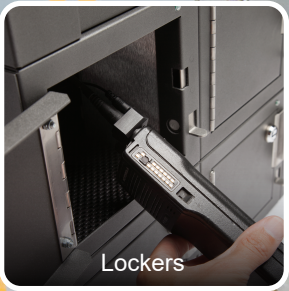

Keep your assets secure

Tamper-Proof Key Rings

Interchangeable Cores

Lockers

Key Boxes

User ID Options

KSI's extensive product line and custom engineering solutions are tailored to produce a more secure, efficient, and cost-effective operational environment. Cities and municipalities across the country have turned to key control and asset management systems to enhance security, improve employee efficiency, and manage security-related expenditures.

Our electronic key control systems provide electronic key cabinets and asset management systems, that provide real-time tracking and monitoring of key usage. Management can program access permissions and/or key restrictions for specific users to reduce the potential for theft or loss. Users can perform regular audits of the system to resolve any discrepancies, manage unauthorized access and reduce loss of keys or assets.

KSI's GFMS system integrates with other security systems, such as surveillance cameras and alarm systems, to enhance overall security measures, mitigate security risks, and ensure that access to critical areas is properly controlled and monitored.

Security Asset Managers

High-security, electronically-controlled key positions. Assets released to authorized users with active identification. Monitors and records asset removal to help prevent loss and theft. SAM key boxes are available in 8, 16, 32, 64, and 96 key positions. Custom solutions are available.

Access Control

KSI products work with your existing access control system.

Lockers

Smart storage standard or custom built, electronically controlled lockers can be modified any number of ways to accommodate the needs of your facility. Lockers secure a range of high-value assets in all shapes and sizes.

SWATBox

Features an embedded install which conceals physical assets within your facility wall and away from public view. The customizable interior cavity may hold cards and keys or act simply as a locked drawer.

Tamper-Proof Key Rings

High security solid and stranded stainless steel rings. They cannot be opened without detection, thus preventing asset removal or substitution. Five sizes available in each style

Global Facilities Management System™

GFMS™ combines sophisticated and adaptable, web enabled, PC-based software with no client installations. Dynamic integration and custom application are cornerstones of our philosophy towards system management. KSI will help you formulate an asset management strategy specific to your facility's requirements, regardless of size, scope and pre-existing technology.
