

Asset Storage Room for Electronic Tracking

Transform your existing storage area into an electronic vault with asset tracking and monitoring options powered by KSI SmartButton. GFMS™ Software restricts and monitors user access while tracking usage for detailed reporting.

- Any sized asset(s) can be serialized for monitoring
- Enroll any number of assets
- Expandable as your needs grow
- Return asset(s) to any position
- Use pre existing shelving or order from KSI
- Secure personal or company property
- Track asset(s) use

You've seen the KSI SmartButton Asset Vault, now expand your options outside the vault! The same technology used in the Asset Vault can be applied to virtually any existing shelving system or room. Large or bulky items that may not fit inside the vault are now able to be fully secured and monitored through GFMS.

The KSI SmartButton SAM combines the security of our Security Asset Managers and the ease of the KSI SmartButton Key Tag.

If quantity is a concern, the KSI SmartButton Wall Panels can be mounted directly to your walls with endless expansion. Cover an entire room with these key and asset tracking panels.

*Actual products may vary from images shown.

KSI SmartButton Asset Vault

The application of a KSI SmartButton provides each asset with a unique identity. Store assets internally on adjustable shelving or tethered externally.

Asset Tracking of Shelving Systems

The KSI SmartButton Technology used in our vaults may be applied to any existing shelving system or room. Our easily installed modules make retrofitting of your current storage area quick and easy.

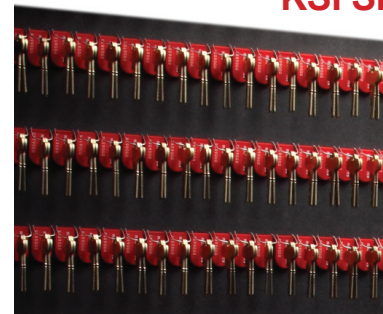

KSI SmartButton Key Tag SAM

Go beyond monitoring and add a high level of security by combining KSI SmartButton Key Tags and Security Asset Managers. Protected by a locked, steel door, only those with the proper identification may access the contents of the SAM.

As with our other SAM cabinets, the Key Tag SAM also works with expansion cabinets.

KSI SmartButton Wall Panels

Maximize storage capacity. Mount key tag panels directly to your walls. Configure and expand asset storage by adding unlimited key panels to the entire room. Monitor the presence of your assets through GFMS.

KSI Satellite

Add the KSI Satellite to the room as a door control to secure and monitor the access of these important items.

Each of these products can be interconnected and work seamlessly with the GFMS Software.
